

COMPACT Vlies (fleece) Dreambox® filter unit and Dreambox® 4.0 ALL-IN manual for automatic version, step by step

COMPACT Vlies (fleece) Dreambox® filter unit and Dreambox® 4.0 ALL-IN are similar in function.

The timer used is for setting the time of rolling after the float has given a signal. The switch has three options:

ON = Permanent rolling, **OFF** = Turning off the rolling fleece, **SENSOR** = Auto mode, if the float lifted up the timer starts

The float switch is adjustable in the height, so the water level is controllable. The plastic screw must be open and the could be lifted up or down. The whole unit is removable for cleaning / maintenance.

The minimum water level must be 13 cm and maximum water level should be not higher than 18-20 cm.
The minimum flow rate should be ~ 500 and maximum 6000 liters.
